Git

Data Structure

PERSONAL PROJECTS

PreventApp (03/2023 - 07/2023)

- Web application that shows recent accidents on a map of the Guadalajara Metropolitan Area.
- Development of a scraper to obtain data from social networks.
- Classification of the data obtained by the scraper using two neural networks. The first one is in charge of classifying whether the text refers to an accident or not, the second one to classify according to the type of accident.
- Users can send their alerts about accidents in the area.

Men Shop (11/2022 - 01/2023)

- Online men's clothing store that allows you to simulate purchases and display orders.
- Product filtering through different categories, brands and price ranges.
- You can select different credit cards and addresses that you have saved when placing an order.
- .Net MVC project using SQL Server and Entity Framework.

Snaptwit (06/2022 - 09/2022)

- Social app that allows you to upload posts, comment on them, like them and follow/search other users.
- You can browse the posts of users belonging to the social app and view their profile. You can search for users by name.
- Your feed shows the posts of the users you follow.
- Blazor WASM, .Net API REST, JS, SQL Server, Entity Framework.

iMovies (01/2022 - 03/2022)

- Movie application that shows details, allows searches and filters. Developed in Blazor Server.
- Connects to the TMDB api to request movie data.
- Allows you to create lists of favorites and a list for later viewing.
